

Year 6: Discover Evolution

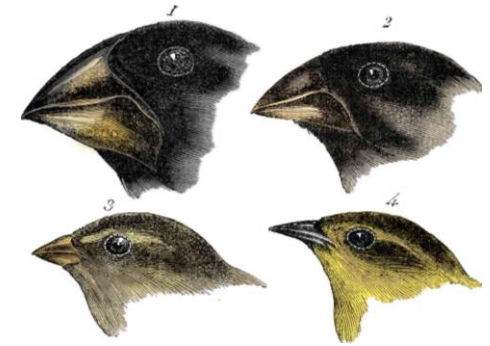

Discover core vocabulary

Adaptation	Animals and plants are adapted to their environment.
Characteristics	A distinguishing trait, feature or quality
Environment	The conditions in which a living thing exists
Evolution	The way in which plants and animals have changed over millions of years
Species	A group of closely related organisms that are very similar to each other
Variation	A change or small difference
Inherited	The way a trait of characteristic is passed to offspring from parents

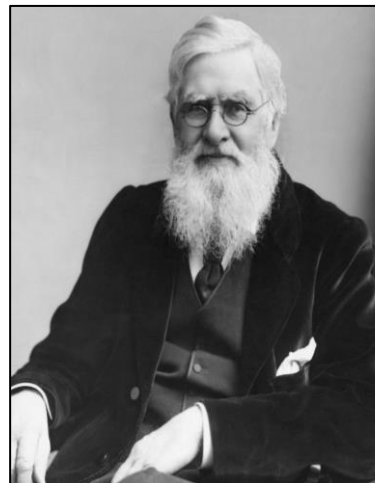

Charles Darwin

Naturalist, biologist and geologist. He proposed that all species of life had descended over time from common ancestors. Wrote 'The Origin of the Species'

Galapagos Finches

Evolution of the Giraffe

Alfred Wallace

Naturalist, biologist and anthropologist. He proposed the theory of evolution and natural selection independent of Charles Darwin.
